Projects

Web Chat App–

Library management system is a software used to manage the different records of library which includes, Users record, Catalog of books, and the transactions of users.

Quiz App –

Build a command line python software. Which allows Users to take quiz and view their scores of current and previous quizzes. Admin can add and delete question or options of multiple-choice question. SQLite3 is also used in this for the backend processes, i.e., as databases.

Spam Classifier –

This classifier can tell whether a given sentence, or a message is spam or not. For this, a dataset of more than 3500 emails are used which were either spam or not. This dataset is used to train the model and further classifies the test messages.
